K-68-C Multi-side bolt puller set, up to 150 mm spread and 270 mm reach

DESCRIPTION

The K-68-C multi-side bolt puller set is used to pull components with threaded holes. The pulling and pushing set features KUKKO Power Nut Technology integrated into the crossbar, which makes it possible to exert a level of force that would otherwise only be achievable using hydraulics. The position of the Power Nut can be changed instantly at the push of a button. When the Power Nut is positioned above the crossbar, increased tension force is achieved. When the Power Nut is positioned below the crossbar, the push load is increased. Three small magnets are attached to the base of the crossbar to align and secure the Power Nut. The multi-crossbar allows up to three leg bolts to be attached for even more uniform force distribution. A scale with numerical values is located on the crossbar for precise adjustment. Various pressure pieces can be used for individual adaptation to the shaft.

APPLICATION AREA

To remove components with threaded holes

BENEFIT

- The sentence covers a variety of common standard threads for adapting the puller device.
- The multi-traverse of series 68 allows for the removal over two or three threads in the component to be disassembled.
- The sentence is equipped with side bolts and can thus be combined with separating knives and Tri-Pull tools.
- The set includes puller jaws for external and internal extraction, which can be combined with the side bolts.

MASTER DATA

GTIN [GTIN]	4021176009150
Country of origin	DE
Material	Tool steel
Series	K-68
Gross weight [kg]	8,79 kg
Package contents	1 set
Packaging Act	PAPPE PAP 21
Worldwide sales capability	Yes (REACH, RoHS, POP, PROP65, TSCA)
