203-3 2- and 3-jaw puller with reversible jaws, combo crossbar, up to 350 mm spread, 260 mm reach

DESCRIPTION

The 2-jaw and 3-jaw puller with crossbar features oscillating and reversible jaws and is used for centric pulling of bearings, gears, and disks in all common sizes for craft, workshop, and industry. This allows for the removal of any component that sits on a shaft and is freely accessible from the outside. The swiveling jaws with adjustable spread are applicable on both sides. Depending on the design, the claw shape varies. Thanks to the crossbar, the puller can be used as both a 2-jaw and 3-jaw tool. The 3-jaw configuration ensures an even load distribution and thus a particularly secure grip on the part being extracted.

APPLICATION AREA

For the centric withdrawal of bearings, gears, and disks in all common sizes for trade, workshop, and industry.

BENEFIT

- Thanks to the combination crossbar, the puller can be used for 2-jaw and 3-jaw pulling.
- Adjustable and 180° rotatable puller jaws for individual adaptation of the reach.
- Oscillating jaws offer a variety of adjustment options.
- Pulling arms with different jaw shapes for flexible working.
- Claw end with slot provides support for screw for additional support when pulling off
- Secure mounting of the spindle through the rotatable spindle tip on both smooth surfaces and in centering (Switch Technology)
- 3-jaw ensures an even distribution of force and allows for greater pulling forces.
- Anti-slip safety (spindle neck) at spindle head for safe working with wrench
- Spindle outlet to protect the thread

OPERATION

- Position the puller jaws from the outside onto the part to be removed
- Swing the jaws under the component
- Manually pull the spindle to fix it in place
- Use a ratchet or a ring spanner to turn the hexagon at the spindle head until the component is loosened
