17-B 4-piece pulling device set with quick-clamping pressure spindle Ø 22-115 mm/350 mm

DESCRIPTION

The 4-piece pulling device set 17-B is used for pulling ball bearings, roller bearings, inner rings, and other flush-fitting parts in trade, industry, and workshops when there is not enough space for jaws. The Separation and Pulling process is capable of first gently separating those parts before they can be pulled off from the outside. Compared to series 15, series 17 is particularly handy because the separating jaws are quickly and centrally clamped by a pressure spindle. This 4-piece set includes one pulling device and one puller as well as a pair of extensions, ensuring the full range of applications.

APPLICATION AREA

To pull ball bearings, roller bearings, inner rings, and other flush-mounted parts in craft, industry, and workshop.

BENEFIT

- A simple and safe handling is made possible by the quick clamping pressure spindle.
- The sharp edges allow for extraction where other types of extraction are not applicable.
- By screwing the separator and puller device together, the highest stability during pulling is ensured.
- If the separator jaws are screwed into the tensioning device in the opposite direction, the contact area is increased and removed in a gentler manner.

MASTER DATA

GTIN [GTIN]	4021176008696
Country of origin	DE
Material	Tool steel
Series	K-17
Gross weight [kg]	10,395 kg
Package contents	1 set
Packaging Act	PAPPE PAP 21
Worldwide sales capability	Yes (REACH, RoHS, POP, PROP65, TSCA)

SPARE PARTS

- 017235_Side bolt with nut
