30-3-S 3-jaw universal puller with narrow jaws, up to 250 mm spread, 200 mm reach

APPLICATION IMAGE

DESCRIPTION

The 3-jaw universal puller with narrow jaws is used for safely removing bearings, gears, and discs in all common sizes for craft, workshop, and industry. It allows for the loosening of any component that sits on a shaft and is freely accessible from the outside. The narrow jaws ensure that even tight and poorly accessible spaces can be reached. The 3-jaw design guarantees an even load distribution and thus a particularly secure hold on the part being pulled.

APPLICATION AREA

For safe removal of bearings, gears, and discs in all common sizes for craft, workshop, and industry.

BENEFIT

- Narrow puller jaws grip optimally in tight and hard-to-reach areas.
- 3-jaw ensures an even distribution of force and allows for greater pulling forces.
- The screw connection allows for easy loosening and especially tight fastening of the jaws with an allen key
- Application also for eccentric components through freely movable, sliding jaws on the crossbar.
- Hexagonal profile on the crossbar for secure counter-holding
- Variable adjustment to any span between 2 mm – 250 mm
- Safety suspension of the claw in the sliding piece (Armlock Technology)
- Safe setup of the spindle through a swivel spindle tip on both smooth surfaces and during centering (Switch Technology)
- Optional convertible from an external puller to an internal extractor by reversing the extraction jaws.
- Anti-slip safety at the spindle neck for safe working with socket wrenches
- Spindle outlet for thread protection
- Pullers are labeled with technical attributes and manufacturer information (label)

OPERATION

- Position the puller jaws externally onto the part to be pulled off
- Slide the claws under the component
- Use a wrench to secure the jaws
- Manually pull the spindle for fixation
- Set the hexagon on the spindle head in motion with a ratchet or a combination wrench until the component is loosened
